

Revised D.R. Horton Project Includes More Smart Growth Features

Posted In [Green Tech, News, Sustainable Business](#)

6/2/2011

Developer D.R. Horton has revised its plans to build a new 12,000-home development on the island of Oahu to include innovative smart growth and sustainable features. The \$4.6 billion project will now preserve 250 acres of land for agricultural uses, including 8 acres devoted to community gardens. The development will also feature a 5-megawatt solar power plant, houses wired for photovoltaic systems and electric vehicle chargers. At least 10 percent of the homes will be built with photovoltaic systems.
