

Hissey Kientz Announced Launch Of Online Legal Documents Database

The law firm of Hissey Kientz, LLP is pleased to announce the addition to its website of a new [legal documents database](#) containing medical studies, case law and other legal documents about many of the firm's practice areas, including mesothelioma and asbestos cases, the Duragesic or fentanyl pain patch and Fleet Phospho-soda.

(Vocus) March 6, 2010 -- The law firm of Hissey Kientz, LLP is pleased to announce the addition to its website of a new [legal documents database](#) containing medical studies, case law and other legal documents about many of the firm's practice areas, including mesothelioma and asbestos cases, the Duragesic or fentanyl pain patch and Fleet Phospho-soda.

A main component of the new database is its [section on asbestos and mesothelioma](#) lawsuits. Mesothelioma is a deadly form of cancer that can affect the lining of the heart, chest or abdomen. The disease is caused by exposure to asbestos—a naturally-occurring mineral that was once widely used for insulation or heat-protection until its carcinogenic properties were widely known. Many workers in industries such as mining, construction, maritime shipping or manufacturing have developed mesothelioma or another asbestos-related disease from being exposed to asbestos dust in the on the job.

The database will also contain [documents related to Duragesic or fentanyl](#) cases. The Duragesic pain patch—which is sold generically as fentanyl—has been recalled several times due to manufacturing problems that could cause a fatal overdose. Because fentanyl gel is 80 times more powerful than morphine, direct skin contact with even a small amount of gel can be fatal. As of 2005, more than 120 deaths had been linked to an overdose caused by a fentanyl or Duragesic patch.

[Fleet Phospho-soda documents](#) are another important component of the new database. The C.B. Fleet Co. recalled its “Fleet Phospho-soda” and “Fleet Phospho-soda EZ-Prep Bowel Cleansing System” products in December 2008 due to an association with a type of kidney damage. This condition—known as acute phosphate nephropathy—can cause irreversible damage to the kidneys which may require transplant surgery.
