San Diego County Water Authority Solar Power Projects Request for Proposals

The San Diego County Water Authority ("Water Authority") seeks proposals from qualified firms or a consortium of firms to design, install, own, operate and maintain solar power systems at facilities owned by the Water Authority and its participating member agencies. The solar power systems may contain inverters, conduits, and other equipment necessary to deliver solar electricity to the Water Authority at interconnection points, carports, shade structures and mounting systems. Goals and objectives of the Water Authority include utilizing agency-owned spaces, such as rooftops, for solar power systems; purchasing solar-generated power through power purchase agreements; and reducing the cost of developing solar energy systems by making a significant long term investment. The Water Authority desires to establish relationships with solar power system developers to facilitate highly cost-effective development of solar power systems at the Water Authority and investment in solar power systems by industries and businesses within the region.

RFP Issued: April 2, 2009

Job-Walk Site Visits: April 8, 9 and 13, 2009
