List of Transvaginal Surgical Mesh Products and Manufacturers

The Food and Drug Administration issued a warning in July 2011 that patients who received a transvaginal mesh device may face a greater risk of complications than those who received other forms of treatment. Transvaginal surgical mesh products are used to treat patients with pelvic organ prolapse (POP) and stress urinary incontinence (SUI).

Hundreds of lawsuits have been filed against transvaginal mesh manufacturers by patients who experienced pain or other problems caused by a faulty device.

The following is a list of transvaginal mesh manufacturers and the surgical mesh devices sold by their companies:

American Medical Systems (owned by Endo Pharmaceuticals)
