

Drug Injury Watch: Summer 2014 Update: Testosterone "Low-T" Drugs: New FDA Safety Warnings; Recent Medical Journal Article About Heart Risks Of Injectable TRT Products

All Testosterone Therapy Drugs Need To Warn About Blood Clots Side Effects Like DVT And PE; Older Depo-Testosterone Product May Be Safer Than New Gels Such As AndroGel And Testim

(Posted by Tom Lamb at www.DrugInjuryWatch.com on July 7, 2014)

SUMMARY: We will start with two recent FDA developments:

1. Testosterone: Drug Information Update- FDA adding general warning to testosterone products about potential for venous blood clots [Issued 6/19/14]
2. Potential Signals of Serious Risks/New Safety Information Identified by the FDA Adverse Event Reporting System (FAERS) between January – March 2014 [Page / List Updated 6/16/14]

Now we shift to the medical journals and, in particular, an article published online July 2, 2014 by the *Annals of Pharmacotherapy*, "Risk of Myocardial Infarction in Older Men Receiving Testosterone Therapy".

We will continue to monitor this still emerging drug safety issue concerning Depo-Testosterone, Testim, AndroGel, Axiron, and other testosterone products -- also called TRT and/or "Low-T" drugs.
