

According to the Millennium Research Group, medical errors are the fifth leading cause of deaths in the United States, with up to 98,000 deaths annually. Research has found that medical errors are the third highest cause of death in the U.S., following heart disease and cancer. These errors can be prevented; however hospitals choose to ignore the problem. In fact, Americans do not enjoy improved health care, compared to their counterparts in industrialized nations. In fact according to an article on [World Health Education Initiative](#), the U.S. ranks 12th, among 13 countries including Japan, Sweden, France and Canada, based on the measurement of 16 health indicators, such as life expectancy, low-birth-weight averages, and infant mortality.

Victims of medical errors do have legal rights. If you or a family member has been injured due to a medical error, it may give rise to a Michigan medical malpractice lawsuit. Our [medical Michigan malpractice lawyers](#) represent victims who suffer injuries due to the negligence of medical staff.

Most Common Medical Errors

According to several research studies, a total of 225,000 Americans have died as a result of their medical treatment. Listed below are the common medical errors performed in the U.S., along with the number of deaths per year caused due to that medical error:

- [Unnecessary Surgery](#) – 12,000 deaths per year
- Medication Errors in Hospitals – 7,000 deaths per year
- Other [Errors in Hospitals](#) – 20,000 deaths per year
- Infections in Hospitals – 80,000 deaths per year
- Negative effects of Drugs – 106,000 deaths per year
